

---

34. (Twice Amended) A photosensitive member comprising:

a substrate;

a charge generating layer being formed on the substrate and containing an organic charge generating material;

a charge transporting layer being formed on the charge generating layer and containing a charge transporting material and a first binder resin; and

an exterior surface layer being formed on the charge transporting layer and containing tantalum doped tin oxide having the mean particle size of 0.3 to 1.0 micro-meters and a second binder resin.
